

News Release

IIJ's Cloud-Based Proxy Service and Cloud-Based WAF Service Registered with the Government's Information System Security Management and Assessment Program (ISMAP)

TOKYO – July 10, 2025 - Internet Initiative Japan Inc. (TSE Prime: 3774), one of Japan's leading Internet access and comprehensive network solutions providers, today announced that IIJ Cloud Proxy Service, a cloud-based proxy service, and IIJ Managed WAF Service, a cloud-based WAF service, have been registered on the Cloud Service List under the government's Information System Security Management and Assessment Program (ISMAP) as services that meet the ISMAP security standards.

The goal of ISMAP is to provide advance assessment and registration of cloud services that satisfy government-stipulated security requirements in order to ensure security standards in government cloud service procurement and facilitate the adoption of cloud services. As a rule, government agencies procure cloud services only from among those registered on the ISMAP Cloud Service List. Services registered with ISMAP are recognized as meeting the level of security assessment standards that are required for government information systems, and this allows customers to use those services with a higher level of safety and security.

■ Certification date and service details

Certification date	Service	Service details
June 30, 2025	IIJ Cloud Proxy Service	This is a cloud-based service that automatically distributes communications to various software-as-a-service (SaaS) platforms via the most appropriate route. https://www.ij.ad.jp/biz/cloud-proxy/
